

Technicians Service Training

Presents

“Advanced Drivability Analysis”

This 3.5 hour seminar utilizes real-world strategies for effective engine performance repairs. Shorten your diagnostic routines by applying useful information from your lab scope, amp probe, gas analyzer and other tools and learn how to combine them with strong logic in order to solve problems quickly and effectively. Subjects covered: Volumetric Efficiency / Running Compression / VVT • Module VREF / Voltage Drop • No Start Analysis • Cranking AC Voltage • Fuel Trim Correction Factor • Crankshaft Relearn • Ignition Primary / Secondary • Techniques for Analyzing Sensors, Actuators, Fuel Control, Fuel Delivery and more.

Learning Objectives:

- To improve the technician's analytical skills
- To help technicians gain a deeper understanding of the tools available today.
- To show the technician how to put it all together in order to operate more efficiently and effectively which will ultimately lead to stronger earnings for him/herself and the shop.

"G" Jerry Truglia
